UV OFFSET PRINTING

Discover your possibilities!

Enhanced gloss and greater luminosity – this is what we achieve with **UV offset printing**. This technique produces images with an extended **three-dimensionality** and a greater **depth**. Thanks to an **innovative inline process**, combinations of matt and glossy coatings are possible. High-gloss surfaces achieve a **great depth effect** and impress **with intensive, bright colours**.

UV offset printing means more **flexibility, high efficiency** and unprecedented **versatility!**

We can print on a wide variety of materials and highlight the smallest details. The best thing about it: **the high quality UV-LE Printing**.

UV offset printing, which we use at LONGO, is one of the **most ecological techniques** available as it consumes up to **60 % less electricity**.

The UV-LE hardening method permits us:

- **Greater application possibilities**
- **Time-saving**
- **Higher productivity**
- **Cost savings**
- **Environmentally friendly work**

Highest quality, efficiency and awareness for environmental protection are united by UV offset printing at LONGO.
